## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/17/2007 has been entered.

### ***Double Patenting***

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 1796

3. Claims 1, 2, 7, 10-20 and 35-54 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-27 of U.S. Patent No. 7,273,912. Although the conflicting claims are not identical, they are not patentably distinct from each other because substantially the same catalyst and process of polymerization have been claimed. The instant claims specify the same metallocene as in patented claims 3 and 18, the same activator as in patented claims 4 and 14, the same support treated with a transition metal compound as in patented claims 7, 8, 21 and 22, and the same polymerization method as in patented claims 10-13 and 24-27. The patented claims stress the sulphate component rather than the transition metal component, but essentially the same process of treating a support material is required. One of ordinary skill in the art would be motivated to select the metallocene of patented claim 3 or 18 with the transition metal treatment compound of 7, 8, 21 or 22 because the patented claims clearly intend such a combination for obtaining the claimed supported catalyst.

Missing from the patented claims are the claimed metal percentages of claims 14, 40 and 50; however, the claimed amounts would be obvious because applicants have claimed substantially the entire range of reasonably expected amounts of metal to be deposited on a silica surface by contacting silica with a transition metal source compound as recited in the patented claims.

It is noted that the prosecution record of U.S. 7,273,912 includes a terminal disclaimer filed in response to a provisional obviousness-type double patenting rejection over the instant application. However, review of the terminal disclaimer reveals that an

Art Unit: 1796

incorrect application number was specified. The disclaimer filed 2/28/2007 in application 10/539,518 disclaims over application 10/529,557, and not the instant application which is 10/539,557. Therefore, the patented file does include a terminal disclaimer over this application.
